FIELD SHEET

NODE LOG

Antenna height decides, not power. Write down what you actually observe.

NETWORK CONFIGURATION

Region set (EU_868 for Europe): _____

Preset used: _____

Private channel created and key shared on: _____

Hop count chosen: _____

REMINDERS

- In Europe: about six minutes of transmission per hour. What you relay for others counts too.
- Raising the antenna a few metres beats doubling the power. Test before buying.
- The default preset isn't private: its key is shared by everyone.
